Re: Identifying State and Local ARARs  
North Cavalcade Site

Dear Mr. Brown:

The 1986 Superfund Amendments and Reauthorization Act (SARA) added Section 121 which required that remedial actions meet applicable or relevant and appropriate requirements (ARARs) established under Federal and State law. Consequently, all Feasibility Studies (FS) must now include discussion of ARARs in evaluation of remedial alternatives.

I am requesting assistance in identifying state and local ARARs for the North Cavalcade site in Houston. I have already located the surface water quality standards, and have given them to CDM. I am specifically interested in air (ambient and incineration related), soil and groundwater. I need to transmit this information to CDM prior to October 31 to enable CDM to deliver the draft FS on schedule. Please let me know if you can help me with this.

Sincerely yours,

James F. Pendergast, P.E.  
Remedial Project Manager  
Superfund Enforcement Section
